Software engineer looking for an opportunity to join a team that works together under the same set standards to solve business problems. A team that offers guidance and mentorship so we can all grow towards common goals whilst working towards best practises. Being part of a company that provides opportunities for individuals to progress and make mistakes.

Work History

2021/05 – 2023/07
Front-End Developer
SuperBike Factory, Manchester

Worked as a developer focussing on e-commerce products ranging from customer facing domains to internal tooling systems. Worked on rebuilding pre-existing services as well as contributing to brand new features and functionality, such as:

- Implemented single sign on authentication and authorisation across our internal tooling services, which created a much more standardised flow to the pre-existing individual service sign in.
- Integrated a headless content management system allowing our product and marketing teams adjust the data within our customer facing domains.
- Created a SBF design system which enabled us to have a consistent standardised pattern to both our internal tooling and customer facing domains.
- Contributed to building a new customer relationship management system to address legacy issues, adding new reporting capabilities and to create a gateway to our other services.

2015/03 – 2021/05
Chef de Partie
Gusto Italian, Liverpool

Whilst studying through college and university I worked full time as a chef. Although not part of my ideal career path, working in such a stressful environment had a profound impact on my personal development. Adhering to set standards, under high pressure, in a fast-paced environment moulded me to have an extreme attention to detail and a great level of organisation.

Education

2018/09 – 2021/05
Electrical and Electronic Engineering
